Mr. John A. Kruger  
Director, Licensing and Enforcement Division  
Bureau of Oil and Hazardous Materials  
State House, Station 17  
Augusta, ME 04333

Dear Mr. Kruger:

By way of this letter I am requesting that Fiber Materials, Incorporated have its status changed from a hazardous waste storage facility and generator to a small quantity generator.

When the initial Federal notification package was mailed out to many Maine industries in the summer of 1980, some of us felt the need to apply for licenses and permits covering many aspects of hazardous wastes until final rules were promulgated. Trying to cover all the bases has caused us to overclassify ourselves.

After an in-depth review of our operations and a visit from Ms. Margaret Leshner and Mr. Bill Sarro of EPA-Boston, FMI has concluded that we do not generate 1,000 kilograms of waste in a calendar month, and therefore request to be listed as a small quantity generator.

If you have any questions, please do not hesitate to telephone me.

Sincerely,

Wendee L. Wright  
Hazardous Waste Manager
